### **DETAILED ACTION**

## Title

1 The following title is suggested: "Method for Adjusting the ESR of multilayer component".

#### Abstract

2. Applicants are reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Currently, the Abstract has 174 words counted. Appropriate correction is required.

Application/Control Number: 10/697,744

# Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Rieb et al (US 5,692,917).

As applied to claim 1, Rieb et al teach a process of selectively making electrical connection within communication I/O port to protect computer software, comprising:

- forming a laminate base structure or connection (Fig. 1, 20) having plated through holes
   (Fig. 1, 22) for introducing press-fit elements,
- forming a laminate cover structure of printed circuit board (Fig. 1, 28; col. 3, lines 39-41) providing very fine conducting paths and having a top mounting plane for mounting chips (Fig. 7, 94; col. 6, lines 1-5) on a substrate or printed circuit board, and
- forming a hybrid structure (Fig. 1, 10) comprised of said laminate surface structure or connection (Fig. 1, 20 & 24) and said laminate cover structure (Fig. 1, 28).

As applied to claim 2, Rieb et al teach a process of selectively making electrical connection within communication I/O port to protect computer software, comprising:

Art Unit: 3729

- forming a laminate base structure or connection (Fig. 1, 20) having plated through holes
   (Fig. 1, 22) for introducing press-fit elements,
- forming a laminate cover structure of printed circuit board (Fig. 1, 28; col. 3, lines 39-41) providing very fine conducting paths and having a top mounting plane for mounting chips (Fig. 7, 94; col. 6, lines 1-5) on a substrate or printed circuit board, and
- forming a sandwich structure (Fig. 1, 10) being comprised of said laminate surface structure or connection (Fig. 1, 20 & 24) and said laminate cover structure (Fig. 1, 28), whereby said structures are subsequently mechanically and electrically conductive connected to each other for transferring data signals (Col. 3, lines 43-45).

## Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tim Phan whose telephone number is 571-272-4568. The examiner can normally be reached on M - F, 9AM - 5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Peter Vo can be reached on 571-272-4690. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
